Introduction

Trusted by enterprise IT professionals around the globe, PA Server Monitor raises the bar on monitoring software by allowing users to increase server efficiency while saving time and money.

The latest version of the widely trusted PA Server Monitor line features updated form and functionality with a sleek new look. Updates to customer-favorite features, and an improved reporting system make PA Server Monitor the optimal software solution for streamlining server monitoring in today's enterprise environments.

PA Server Monitor tracks disk space and device performance on more than a thousand servers/devices from a single station. Combined with its scalable architecture, PA Server Monitor provides the ideal solution for enterprises looking to optimize server efficiency while streamlining IT operations.

Designed by IT managers for managers, find out for yourself why PA Server Monitor has become the software of choice for Fortune 500s and emerging enterprise leaders.

REVIEWS

"I have been and will continue to recommend PA Server Monitor to industry colleagues. Keep up the good work."

TSP Project Manager
Challenger, Australia

"In the health care services in my region (Chaudière-Appalaches), PA Server Monitor is getting very attractive. PA Server Monitor in Chaudière-Appalaches is a real success."

Service Counsel
Architecture et Delpolement
Gestion des Incidents et Service-
Conseil, Canada

"I have created numerous monitors to watch processes, backups, important ftp downloads, services and this product is saving me lots of time and effort and letting me know important information almost immediately instead of searching for problems. It has saved me a ton of time managing the network."

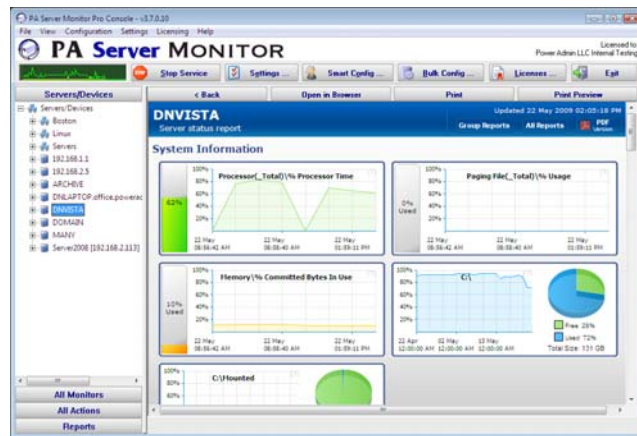

Senior Network Engineer
Presbyterian Foundation, USA

"I must compliment you on your excellent customer service and technical support. Keep up the good work and I'll remain a customer for a long time!"

IT Manager
Cornell University, USA

PA Server Monitor's sleek design and simplistic layout offers users a dashboard for managing server capacities using disk space monitoring, executive scripts and a customizable reporting system.

Avoid server failures by utilizing the updated charting feature, giving server managers a way to simply recognize potential server failures without having to dig through the data. Or establish an alerting system to automatically alert your team at the first sign of a potential failure.

Benefits

- **Quicker to learn with simplistic navigation** Download, install and configure PA Server Monitor with initial monitors in 5 minutes or less.
- **Agentless monitoring** Use Windows RPC, WMI, and monitor-specific protocols to monitor remote servers without requiring an agent to be installed.
- **Application monitoring** Monitor Exchange Servers, Microsoft SQL Servers, IIS servers, Oracle servers and more with unmatched monitoring and threshold customization.
- **Advanced reporting** Create reports on any system resource seamlessly on an embedded management-free database or with MS SQL Server.

About

Power Admin, LLC has been building professional grade system monitoring products for many years. Our products are used by Fortune 500 companies, government entities and educational institutions around the world. Our flagship product, PA Server Monitor, is loved by users and is touted as one of the easiest to use monitoring systems in its class.

All Power Admin products are designed by IT professionals who understand the frustrations of working with sub-par software which fail to meet expectations. Power Admin promises to offer only quality, reliable software after it has been fully tested in the field by IT professionals.
